Few dolphin-watching boats join program

The Florida Keys National Marine Sanctuary will host a first bottlenose dolphin lecture at 6:30 p.m. Monday at the Eco-Discovery Center in Key West, on the Truman Waterfront. The National Marine Fisheries Service will share the impacts of tourism on the dolphins off Key West.

Many clamored for rules, but only 3 have license

BY TIMOTHY O’HARA
Citizen Staff

Dolphin boat captain Lisa Reedy slowly trolls through Key West Harbor Tuesday on her way to an area known locally as the Dolphin Playground.

Reedy, a captain on the Sunny Days Dolphin Cat, educates her small group of tourists about how the Atlantic bottlenose dolphins hunt, mate and socialize. During her monologue on marine mammal protection laws and dolphin ecology, she mentions how it is illegal for people to swim with or feed wild dolphins. It disrupts their hunting and mating patterns and can alter their behavior permanently.

One tourist appears taken aback by her comments, saying she was told by one unscrupulous — or at least uneducated — concierge that they would be able to swim with wild dolphins. Reedy, who provides her patrons with books and literature on dolphin biology and behavior, tells the tourist it is illegal and explains why the

The Boat Trap device still is being developed by the Coast Guard and the Department of Defense, but both groups recently successfully demonstrated the device near Marathon.

Nets to replace bullets in ocean go-fast chases

BY ADAM LINHARDT
Citizen Staff

The Coast Guard’s latest weapon against drug-runners and human smugglers looks more like a fishing net than the typical high-tech, nonlethal gizmos unleashed by the Department of Defense over the past few years.

As the military perfects microwave guns, noise machines and beanbag bullets, the “Boat Trap” net designed by the Joint Non-Lethal Weapons Directorate appears surprisingly low-tech. Law enforcement officers simply drop a net in front of a boat, the propeller of which becomes entangled in it, forcing it to stop.

“Entanglement of a vessel’s propeller has been demonstrated as a promising, nonlethal means to quickly and safely impede or stop a small, high-speed boat,” said Darrel Webb, project engineer for the Joint Non-Lethal Weapons Directorate. “Maritime security units, from port security to offshore interdiction, could benefit from this capability.”

Such nets could get wide-
Man's body found floating

A man's body was found floating in the water about two miles south of Key West around 1 p.m. Saturday, according to the Coast Guard.

"A Good Samaritan reported it to us," said spokesman Lt. j.g. Matt Meinhold. "We did a search between here and Boca Chica to see if he might have fallen off a boat or something, but didn't find anything else."

The Monroe County Sheriff's Office recovered the body, Meinhold said, and it was turned over to the county coroner. There was no identification on the body, he said, but it looked like it hadn't been in the water for too long.

There was no other information available as of press deadlines Saturday night.

Learn about coral restoration

Ken Nedimyer, president of the Coral Restoration Foundation, will talk about his work Wednesday night at the Visitor Center in John Pennekamp Coral Reef State Park, Mile Marker 102.5, oceanside.

Gates will open at 7 p.m.; the lecture will be at 7:30. Nedimyer's talk marks the second of the 18th series of the "Delicate Balance of Nature" lectures sponsored by Dagny Johnson Key Largo Hammock Botanical State Park.

The Coral Restoration Foundation manages a nursery off Key Largo where staghorn corals are grown for research and restoration projects. It's free to enter the park for the lectures. Seating is limited, and more comfortable with a cushion. For more information, call Elena Muratori at 305-451-1202.

Dolphins

Continued from page 1A

laws are in place. The tourist is not happy with the end result, but she seems to understand the logic behind it.

Such misinterpretations of the Marine Mammal Protection Act are one of the reasons why the Florida Keys National Marine Sanctuary implemented a program for responsible wild-dolphin viewing. Sunny Days, Dolphin Safari and the Java Cat are the only three Key West-based eco-dolphin-watching tours to receive a Dolphin SMART certification, which is completely voluntary, from the sanctuary. All of the operators, not only those in Dolphin SMART, share information about where dolphins are and split their time with them to minimize the effects of their presence.

"We like to call it a healthy competition," Neely said.

The sanctuary recognizes and rewards operators who follow the protocols laid out in the Marine Mammal Protection Act that allow for healthy and sustainable wild-dolphin viewing practices. The acronym "SMART" is a reminder of the basic principles: Stay, move, always, refrain and teach.

The complete version: Stay at least 50 yards from dolphins, move away slowly if the dolphins seem disturbed, always put your vessel in neutral when dolphins are near, refrain from feeding, touching or swimming with wild dolphins, and teach others to be Dolphin SMART, said program coordinator Megan Hartman.

"A fascination and curiosity of dolphins may cause people to want an up-close experience with marine mammals, but many don't realize that the negative impact it could cause," sanctuary spokeswoman Carrie Carnes said.

In return, the operators are listed on the sanctuary's Dolphin SMART Web site, DolphinSMART.org, and other educational and promotional program materials that are distributed through Florida Keys chambers of commerce, conference and booking agents, hotels and other tourist locales. Being a member of the program also offers participating operators with opportunities for extra media exposure.

The program, which educates operators on marine mammal laws, dolphin research and dolphin behavior, has been replicated in other states. Dolphin SMART has been launched in Alabama, and the groups are working on establishing it in Hawaii.

The sanctuary, National Marine Fisheries Service, Dolphin Ecology Project and Whale and Dolphin Conservation Society developed the Dolphin SMART program after a forum on the Sanitary Conference with concerns that an increasing number of charter boats potentially were harassing dolphins.

Nearly five years ago, many dolphin-watching, eco-tourism boat captains were clamoring for sanctuary officials to develop a program with guidelines for dolphin viewing. At the time, Key West saw a surge in dolphin-watching operators, with it peaking at nearly 40.

Sanctuary managers held meetings and started the SMART program, which was officially launched in 2007.

But of the remaining 13 Key West operators, only three have received Dolphin SMART certification to date. Another six have received training but not the certificate. Some disagree with the advertising policies and other requirements, Carnes said. Operators can display underwater dolphin photos or photos of people swimming with dolphins.

To help build interest and participation in the program, the sanctuary will host a free lecture at 6 p.m. Tuesday at the Florida Keys Eco-Discovery Center in Key West. Marine biologists from the National Marine Fisheries Service will share their expertise on the effects of tourism on the marine mammals in Key West and the effects of water quality on dolphins in Biscayne Bay.

Hundreds of dolphins call the waters of Key West home, affording visitors the memorable experience of seeing them in their natural habitat.

Since 2004, researchers have been documenting the behaviors of Key West dolphins and the pressures they face from tourism.

One of those researchers, Laura Engleby, will discuss the findings of a year-long study on Key West's resident dolphins. She has assembled a photo archive of resident dolphins' dorsal fins, which has allowed her and other researchers to document their life cycles and movements through the Keys and Florida Bay. Her archive is used by Dolphin SMART operators to help educate their patrons on Keys' dolphin ecology.

Another National Marine Fisheries Service researcher, Jenny Litz, will discuss dolphin population structure and habitat use of the dolphins in Biscayne Bay.

The Eco-Discovery Center is at 35 East Quay Road in the Dr. Nancy Foster Environmental Complex at Truman Waterfront in Key West. Parking is free.

The public is invited to a free lecture on wild Atlantic bottlenose dolphins at 6:30 p.m. Monday at the Florida Keys Eco-Discovery Center on the Truman Waterfront in Key West. Parking is free. The lecture is hosted by the Florida Keys National Marine Sanctuary's Dolphin SMART program.

The city of Key West's Citizen Review Board will meet at 6 p.m. Monday at Old City Hall, 510 Greene St. To see case files, call Director Stephen Muffler at 305-809-3897 or visit http://www.keywestcity.com. A board member position is vacant.

Key West artist Dick Moody will be featured in an Art Center Sunday Show, opening with a reception from 4 to 7 p.m. today at the Key West Art Center, 301 Front St. The exhibit will feature 25 acrylics on mahogany paintings from camping trips to the Dry Tortugas aboard the Yankee Freedom ferry. Two tickets to the Tortugas will be awarded to a purchaser of Moody artwork. Refreshments will be served. For more information, call 305-294-1241.

The Florida Keys Audubon Society will hold its monthly meeting at 6 p.m. Monday at Indigo Gulf Park on White Street. Jerry Lorenz, director of the Audubon Science Center in Tavernier, will talk about new information on Roseate Spoonbills learned from recent satellite tracking projects. Attendees are encouraged to bring a dish for the potluck supper. There will also be a bird walk before the meeting at 5:30 p.m. All are welcome. Call 305-517-5701 or 305-987-6059.

Sandra Atkinson will tutor "En Plein Air" painting classes at 1 p.m. Tuesdays and 9 a.m. Saturdays. All classes will meet at her studio, at 328 Skinnornt St. Students are requested to bring supplies. The cost is $30 per session. For more information, call 305-396-7493.

Instructor Will Soto will teach the ancient Chinese martial art of tai chi from 9 to 10 a.m. Tuesdays and Thursdays at the Key West Tropical Forest & Botanical Gardens, 5210 College Road, Stock Island. Beginners and all ages are welcome. Loose clothing is suggested. Call 305-923-9196.

Learn how to create gardens

Landscape designer Patrick Tierney will present a free evening workshop, "A Garden in Balance: Blending Natives with Troperials," from 5:30 to 7 p.m. Jan. 14 at West Martello Fort as part of the Key West Garden Club’s 2009 Horticulture Education Series.

Tierney, whose tropical landscaping has been featured on Home and Garden Television, in books and magazines, is known for his private and public gardens, including the Key West Library Palm Garden. This in-depth workshop is open to the community and will feature step-by-step how tos and photos, followed by a social where Tierney will give one-on-one answers to individual questions. Arrive early to get a seat. For more information, call Kim Gordon at 305-745-2030.

Domino’s
Continued from page 1A
has long resided will spill open.
Ranson, unaware that the anti-chain store law would apply to him, first opened his Domino’s a year ago, only to have it shut down by village code enforcement after a couple of days. In response, Ranson converted the small storefront to a faux Domino’s, which he called Murphy’s Law Pizza, which served Domino’s items, but without the signage, pizza boxes, menu logos and other branding. Ranson closed the pizzaria in May at the insistence of Domino’s, which informed him he was violating his franchise agreement.

Still, with the storefront already leased, it was a relatively simple matter to reopen the Domino’s once the Islamorada chain-store ban was repealed.

For other companies that previously have expressed an interest in the village, such as Publix and Walgreens, things likely would be far more complicated. Details like land purchases, lease agreements, permitting and site plan approvals must be worked out. Then there’s the sagging economy that is stifling many companies’ desire to expand.

Though he declined to be specific, Realtor George Wilson in recent weeks said he has been showing properties to agents for several chains stores and restaurants. So far he’s had no luck, primarily, he said, because potential sellers are vastly overestimating their properties’ worth in the 2009 economy.

“There are people holding out for $4 million or $5 million cash,” Wilson said. “They’re dreaming.”
