SUMMARY: The Gray’s Reef (a U.S. National Marine Sanctuary (CRMS or Sanctuary) was designated in January 1981, and consists of 17 square nautical miles of open ocean and five bottom habitats approximately 17.5 nautical miles east of Sapelo Island, Georgia. The present management plan for the Sanctuary was completed in 1983. In accordance with Section 305(b) of the National Marine Sanctuaries Act, as amended, (NMSA) (16 U.S.C. 1431 et seq.), the Marine Sanctuaries Division (MSD) of the NOS of the National Oceanic and Atmospheric Administration (NOAA) is initiating a review of the management plan, to evaluate substantive progress toward implementing the goals for the Sanctuary, and to make revisions to the plan and regulations as necessary to fulfill the purposes and mandates of the NMSA.

The proposed revised management plan will likely involve changes to existing policies and regulations of the Sanctuary, to address contemporary issues and challenges, and to better protect and manage the Sanctuary’s resources and qualities. The review process is composed of four major stages: Information collection and characterization; preparation and release of a draft management plan/environmental impact statement, and any proposed amendments to the regulations; public review and comment; preparation and release of a final management plan/environmental impact statement, and any final amendments to the regulations. NOAA anticipates completion of the revised management plan and consequent documents will require approximately eighteen to twenty-four months.

NOAA will conduct public scoping meetings to gather information and other comments from individuals, organizations, and government agencies on the scope, types and significance of issues related to the sanctuary’s management plan and regulations.
